

Mea Msds

Page 1: MEA Properties and Treating Systems

Product Name: Monoethanolamine (MEA). MEA is a clear, viscous liquid with a mild ammoniacal odor. It is widely used in amine treating units to remove acid gases (H₂S and CO₂) from LPG and fuel gas streams. Flashpoint: 85 deg C (Class IIIA combustible liquid).

Safety Hazards: MEA is corrosive to skin, eyes, and respiratory tract. It reacts violently with strong oxidizers and copper alloys (causing corrosion). Operators must wear chemical resistant gloves and safety goggles. Dispose of spent amine residues in certified incinerators.
